DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 22 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 22 is considered indefinite because it is a dependent claim, which depends upon itself.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 9-13, 15-16, and 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Thomas (US 6,391,098). Thomas is considered to disclose the claimed assembly and method comprising:

an air dryer **24** including a manifold (please see column 3 line 45 wherein the disclosed air flow split is considered to anticipate the claimed manifold) and a desiccant cartridge **34**;

a bore A1 or A2 running through said manifold: and

Art Unit: 3749

a fastener, which includes a spin-on desiccant cartridge, disposed in said bore, wherein air flow passing through the air dryer intersects the bore and communicates to a purge volume (please see column 2 lines 42-47 wherein broad discussion of screw threaded pressure bearings for inlet and outlet modular pressure fittings is considered to imply the claimed bore fastener for airflow intersection) wherein said fitting is secured to a reservoir 50;

optionally a means for preventing rotation of the air dryer when said air dryer is secured to the purge reservoir including a second fastener placed through a bore on an extension disposed on said manifold (again please see column 2 lines 42-47 wherein broad discussion of screw threaded pressure bearings for inlet and outlet modular pressure fittings is considered to imply the claimed rotation prevention means); or alternatively

delivering a flow of air to an air dryer manifold with a desiccant bed canister attached thereto (please see column 3 lines 16-29);

passing said flow of said air through the desiccant bed, thereby drying the air (please see column 3 lines 35-41);

delivering the dried air to a set of downstream components (please see column 4 lines 32-58);

purging the desiccant bed with purge volume to regenerate the a purge flow from a desiccant bed (please see column 3 lines 35-41); and

exhausting said purge flow after it has passed through said desiccant bed (please see column 4 line 31);

wherein said purge flow passes from via a bore in said manifold in which said purge volume a fastener securing said air dryer to the vehicle is disposed (please see column 2 lines 42-47 wherein broad discussion of screw threaded pressure bearings for inlet and outlet modular pressure fittings is considered to imply the claimed fastener for vehicle securing). Thomas is also considered to disclose the claimed stabilization and rotation prevention means including a bolt (please see column 2 lines 42-47 and the accompanying analysis discussed above in this rejection), two or more protruding arms 36 and 40, commercial vehicle air brake system connection (column 1 line 3), and first and second passageways (column 4 lines 20-43).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 3749

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Thomas. Thomas is considered to disclose the claimed invention, as discussed above in the anticipatory rejection, except for the claimed corresponding thread measurements. It would have been an obvious matter of design choice for one skilled in the art to claim the corresponding thread measurements, since it has not been specified that the claimed corresponding thread measurements provide any advantage over the prior art threaded correspondence discussed in primary reference Thomas.

Claims 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thomas in view of Shamine et al. (US 5,622,544). Thomas is considered to disclose the claimed invention, as discussed above in the anticipatory rejection, except for the claimed interlock or anti-rotation mechanism. Shamine is considered to disclose the claimed interlock or anti-rotation mechanism at column 5 lines 7-21 wherein the disclosed interlock function implies the claimed anti-rotation mechanism to prevent air dryer rotation, in the same manner and function as the claimed interlock. It would have been obvious for one skilled in the art to combine the teachings of primary reference. Thomas with the teachings in secondary reference Shamine for the claimed interlock or anti-rotation mechanism for the propose of providing a secure fastener connection of an air dryer connection to its supporting housing.

Claims 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thomas. It is assumed that claim 22 depends upon claim 21 rather than itself. Thomas is considered to disclose the claimed invention, as discussed above in the anticipatory rejection, except for the claimed mounting bracket to rail height ratio. It would have

Art Unit: 3749

been an obvious matter of design choice for one skilled in the art to claim the mounting bracket to rail height ratio, since it has not been specified that the claimed mounting bracket to rail height ratio provides any advantage over the mounting bracket to rail height ratio shown and implicitly discussed in primary reference Thomas.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen Gravini whose telephone number is 703 308 7570. The examiner can normally be reached on normal weekday business hours (east coast time).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ira S. Lazarus can be reached on 703 308 1935. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have guestions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
